1.1 WALTZED IN FROM THE RUMBLING

Plants & Animals are a Montreal-based indie rock trio that began playing together as kids. Touring arduously for about five years after their proper full-length debut in 2008, they pretty much made their records on the go until 2013. So the band's decision to be slow, deliberate, and thorough on their latest offering, *Waltzed In From The Rumbling*, represents a major change of pace. Finally sleeping in their in own beds while recording, the band assembled the album over the course of nine seasons. It's a return to their origins, but it also pushes audaciously forward.

The aesthetic varies wildly and wonderfully from track to track, each song having its own hermetic seal but somehow still melding cohesively as a body of work. Jangling guitars, drums leaning toward the off-kilter swing of J Dilla, found sounds, a hint of shoegaze, and unorthodox instrumentation come together to keep the ear constantly engaged with a feeling of constant evolution. They found an antique guiro next to a broken VCR and recorded both. They made an empty fridge sound like a timpani drum. They recorded gossip on a city bus. They brought in classical string flourishes. They sometimes left mistakes if they felt they were perfectly imperfect. It's truly DIY, but with a feel of big production value that makes the album soar.

Contemplative lyrics anchor the album through all the exploratory wandering. The words are delivered melodically, belying their potency, but listening beyond the pretty aesthetic reveals piercing observations and an undeniable translation of feeling. The simplicity of the penetrating refrain on the three-part mini opus "Je Voulais Te Dire" is a paragon of how the lyrics effortlessly cut through the instrumentation. Guitarist/vocalist Warren Spicer sings "It's only love, but you want it bad," encompassing how we try to avoid and downplay our desire for love and affection, but ultimately search and long for it anyway.

词汇补充:

aesthetic	adj. 美的; 审美的	affection	n. 喜爱, 感情; 影响; 感染
album	n. 相簿; 唱片集; 集邮簿	anchor	n. 锚; v. 抛锚停泊
antique	adj. 古老的; n. 古董, 古玩	arduously	adv. 严酷地; 费力地
assembled	adj. 组合的; 安装的	audaciously	adv. 无畏地; 放肆地; 大胆创新

belying	v. 掩饰 (belie 的 ing 形式)	cohesively	adv. 黏合地; 团结地
constant	adj. 不变的; 恒定的	contemplative	adj. 沉思的; 冥想的; 默想的
debut	n. 初次登台; 开张	deliberate	adj. 故意的; 深思熟虑的
downplay	vt. 不予重视; 将...轻描淡写	drum	n. 鼓; 鼓声
encompassing	adj. 包含的; 包容的, 环绕	exploratory	adj. 勘探的; 探究的; 考察的
flourishes	v. 繁荣; 夸耀	gossip	n. 小道传闻; vi. 闲聊
guiro	n. (乐器) 锯琴	hermetic	adj. 密封的; 与外界隔绝的
instrument	n. 仪器; 工具; 乐器	melding	v. 融合; 使结合
melodically	adv. 音调优美地	opus	n. 作品 (复数为 Opera)
paragon	n. 模范; 完美之物	penetrating	adj. 渗透的; 有洞察力的
piercing	adj. 刺穿的; 敏锐的	potency	n. 效能; 力量; 潜力
refrain	vi. 克制; n. 副歌	seal	n. 密封; 海豹 v. 密封
shoegaze	n. (摇滚乐) 自赏派	simplicity	n. 朴素; 简易; 天真
soar	n. & v. 高飞; 高涨	trio	n. 三重唱; 三件套
unorthodox	adj. 非正统的; 异端的	wandering	adj. 流浪的; 漫游的

1.2 BLACK DIAMONDS

An exotic type of diamond may have come to Earth from outer space, scientists say. Called carbonado or "black" diamonds, the mysterious stones are found in Brazil and the Central African Republic. They are unusual for being the colour of charcoal and full of frothy bubbles. The diamonds, which can weigh in at more than 3,600 carats, can also have a face that looks like melted glass.

Because of their odd appearance, the diamonds are unsuitable as gemstones. But they do have industrial applications and were used in the drill bits that helped dig the Panama Canal. Now a team led by Stephen Haggerty of Florida International University in Miami has presented a new study suggesting that the odd stones were brought to Earth by an asteroid billions of years ago. The findings were published online in the journal *Astrophysical Journal Letters* on December 20.

The scientists exposed polished pieces of carbonado to extremely intense infrared light. The test revealed the presence of many hydrogen-carbon bonds, indicating that the diamonds probably formed in a hydrogen-rich environment—such as that found in space.

The diamonds also showed strong similarities to tiny nano-diamonds, which are frequently found in meteorites. "They're not identical," Haggerty said, "but they're very similar." Astrophysicists, he added, have developed theories predicting that nano-diamonds form easily in the titanic stellar explosions called supernovas, which scatter debris through interstellar space.

The deposits in the Central African Republic and Brazil, he said, probably come from the impact of a diamond-rich asteroid billions of years ago, when South America and Africa were joined. So even though the two diamond fields are now thousands of miles apart, they're remnants of a single, original deposit. Haggerty estimated that the asteroid must have been about half a mile (one kilometre) in diameter.

词汇补充:

asteroid	n. [天] 小行星	astrophysicist	n. 天体物理学家
carat	n. [宝][计量] 克拉	carbonado	n. [矿物] 黑金刚石; 烤鱼, 烤肉
charcoal	n. 木炭; 炭笔	debris	n. 碎片, 残骸
deposit	n. 存款; 沉淀物	diameter	n. 直径
drill	n. & v. 钻井, 钻头	exotic	adj. 异域风情的
explosion	n. 爆炸	expose	v. 曝光
gemstone	n. 宝石	infrared	n. & adj. 红外的
intense	adj. 强烈的; 紧张的	interstellar	adj. (穿梭于) 星际的
meteorite	n. [地质] 陨石	mysterious	adj. 神秘的
polished	adj. 擦亮的; 圆滑的	remnant	n. 残余; 残留物
scatter	vi. 分散, 散开; 散射	supernova	n. [天] 超新星
titanic	adj. 巨大的		

1.3 DRINKING IN BRONZE AGE

By the Bronze Age drinking vessels were being made of sheet metal, primarily bronze or gold. However, the peak of feasting - and in particular, of the 'political' type of feast - came in the late Hallstatt period (about 600-450 BC), soon after the foundation of the Greek colony of Massalia (Marseille) at the mouth of the Rhine. From that date on, the blood of the grape began to make its way north and east along major river systems together with imported metal and ceramic drinking vessels from the Greek world.

Wine was thus added to the list of mood-altering beverages - such as mead and ale (see coloured text below) - available to establish social networks in Iron Age Europe. Attic pottery fragments found at hillforts such as Heuneburg in Germany and luxury goods such as the monumental 5th century Greek bronze krater (or wine mixing vessel) found at Vix in Burgundy supply archaeological evidence of this interaction. Organic containers such as leather or wooden wine barrels may also have travelled north into Europe but have not survived. It is unknown what goods were traded in return, but they may have included salted meat, hides, timber, amber and slaves.

词汇补充:

ale	n. 麦芽酒	amber	n. 琥珀; 琥珀色
archaeological	adj. [古] 考古学的	attic	n. 阁楼; 顶楼
barrel	n. 机筒; 压辊; 滚桶	beverage	n. 饮料; 酒水
bronze	n. 青铜; 古铜色	ceramic	adj. 陶瓷的; 陶器的
colony	n. 殖民地	container	n. [包装] 容器; 集装箱
feast	n. 筵席, 宴会; 节日	fragment	n. 碎片; 片断或不完整部分
interaction	n. 相互作用; 互动	krater	n. (古罗马) 双耳喷口杯
monumental	adj. 不朽的; 纪念碑的	mood-altering	adj. 调整情绪的
pottery	n. 陶器; 陶器厂	slave	n. 奴隶, 服侍的人
timber	n. 木材; 木料	vessel	n. 舰船; 血管; 容器

1.4 WOLF STORY

From the wolves' perspective, this is clearly good news. But it also had beneficial effects on the ecology of the park, according to a study published in 2004 by William Ripple and Robert Beschta from Oregon State University. In their paper in BioScience, the two researchers showed that reintroducing the wolves was correlated with increased growth of willow and cottonwood in the park. Why? Because grazing animals such as elk were avoiding sites from which they couldn't easily escape, the scientists claimed. And as the woody plants and trees grew taller and thicker, beaver colonies expanded.

Of course, not every wolf story is positive. National Public Radio in the US reported last July that a nine-year-old programme to reintroduce the endangered Mexican grey wolf in the southwestern US was struggling because some wolves weren't learning to hunt in the wild and because others were simply being shot. Perhaps the shotgun response of locals in the mountains of Arizona and New Mexico was unsurprising, for the wolves had been preying on livestock. The reintroduction area is apparently grazing land.

词汇补充:

grazing	n. 放牧; 牧草	beaver	n. 海狸; 海狸皮毛
correlated	adj. 有相互关系的	cottonwood	n. 杨木; 三角叶杨
ecology	n. 生态学; 社会生态学	elk	n. 麋鹿; 软鞣粗皮

endangered	adj. 濒临灭绝的	preying	adj. 捕食性的; 掠夺的
reintroduce	v. 再引入; 再提出	shotgun	n. 霰弹猎枪
willow	n. [林] 柳树;		

1.5 PINK ONIONS

The most vital ingredient in Indian cooking, the basic element with which all dishes begin and, normally, the cheapest vegetable available, the pink onion is an essential item in the shopping basket of families of all classes.

A popular saying holds that you will never starve because you can always afford a roti (a piece of simple, flat bread) and an onion.

But in recent weeks, the onion has started to seem an unaffordable luxury for India's poor. Over the past few days, another sharp surge in prices has begun to unsettle the influential urban middle classes.

The sudden spike in prices has been caused by large exports to neighboring countries and a shortage of supply. But the increase follows a trend of rising consumer prices across the board — from diesel fuel to cement, from milk to lentils.

词汇补充:

afford	vt. 给予, 提供; 买得起	cement	n. 水泥
diesel	n. 柴油机; 柴油	export	n. 出口商品; 输出额
influential	adj. 有影响的; 有势力的	ingredient	n. 原料; 要素; 组成部分
lentil	n. [作物] 小扁豆	roti	n. 烤肉, 烤面包
spike	n. 长钉, 道钉; 钉鞋	starve	v. 饿死; 挨饿
sudden	adj. 突然的, 意外的	unaffordable	adj. 买不起的

1.6 THE FABRIC OF THE COSMOS

Surely, reality is what we think it is; reality is revealed to us by our experiences.

To one extent or another, this view of reality is one many of us hold, if only implicitly. I certainly find myself thinking this way in day-to-day life; it's easy to be seduced by the face nature reveals directly to our senses. Yet, in the decades since first encountering Camus' text, I've learned that modern science tells a very different story. The overarching lesson that has emerged from scientific inquiry over the last century is that human experience is often a misleading guide to the true nature of reality.

词汇补充:

implicitly	overarching
inquiry	seduced
misleading	surely

1.7 EXPLORING THE DEEP OCEAN FLOOR

The ocean floor is home to many unique communities of plants and animals. Most of these marine ecosystems are near the water surface, such as the Great Barrier Reef, a 2,000-km-long coral formation off the northeastern coast of Australia. Coral reefs, like nearly all complex living communities, depend on solar energy for growth (photosynthesis). The sun's energy, however, penetrates at most only about 300 m below the surface of the water. The relatively shallow penetration of solar energy and the sinking of cold, subpolar water combine to make most of the deep ocean floor a frigid environment with few life forms.

In 1977, scientists discovered hot springs at a depth of 2.5 km, on the Galapagos Rift (spreading ridge) off the coast of Ecuador. This exciting discovery was not really a surprise. Since the early 1970s, scientists had predicted that hot springs (geothermal vents) should be found at the active spreading centers along the mid-oceanic ridges, where magma, at temperatures over 1,000 °C, presumably was being erupted to form new oceanic crust. More exciting, because it was totally unexpected, was the discovery of abundant and unusual sea life -- giant tube worms, huge clams, and mussels -- that thrived around the hot springs.

1.8 TRAINING MEDICAL MANAGERS

In the fast-changing world of modern healthcare, the job of a doctor is more and more like the job of chief executive. The people who run hospitals and physicians' practices don't just need to know medicine. They must also be able to balance budgets, motivate a large and diverse staff and make difficult marketing and legal decisions.

"The focus in medical school is to train good doctors, but part of being a good doctor is being a good manager," says Fawaz Siddiqi, a neurosurgical resident at the London Health Sciences Centre in Canada. "It's having a core understanding of how to work within the context of an organisation."

The desire to be a "good manager" is precisely the reason Dr Siddiqi, who aspires one day to run a hospital, decided to go back to school. This past autumn he enrolled in a health-sector MBA programme at the Ivey School of Business at the University of Western Ontario.

词汇补充:

1.9 DOES SPACE TRAVEL DAMAGE EYESIGHT?

Researchers already know that spending long periods of time in a zero-gravity environment — such as that inside the International Space Station (ISS) — results in loss of bone density and damage to the body's muscles. That's partly why stays aboard the ISS are capped at six months. And now, a number of NASA astronauts are reporting that their vision faded after spending time in space, with many needing glasses once they returned to Earth.

1.10 DNA BARCODING

DNA barcoding was invented by Paul Hebert of the University of Guelph, in Ontario, Canada, in 2003. His idea was to generate a unique identification tag for each species based on a short stretch of DNA. Separating species would then be a simple task of sequencing this tiny bit of DNA. Dr Hebert proposed part of a gene called cytochrome c oxidase I (COI) as suitable to the task. All animals have it. It seems to vary enough, but not too much, to act as a reliable marker. And it is easily extracted, because it is one of a handful of genes found outside the cell nucleus, in structures called mitochondria.

The idea worked, and it has dramatically reduced the time (to less than an hour) and expense (to less than \$2) of using DNA to identify species. And thus, in July this year, Dr Victor's mystery goby became *Coryphopterus kuna*. It was the first vertebrate to have its DNA barcode – a sequence of about 600 genetic “letters” – included in its official description.

Barcoding has taken off rapidly since Dr Hebert invented it. When the idea was proposed, it was expected to be a boon to taxonomists trying to name the world's millions of species. It has, however, proved to have a far wider range of uses than the merely academic – most promisingly in the realm of public health.

One health-related project is the Mosquito Barcoding Initiative being run by Yvonne-Marie Linton of the Natural History Museum in London. This aims to barcode 80% of the world's mosquitoes within the next two years, to help control mosquito-borne diseases. Mosquitoes are responsible for half a billion malarial infections and 1m deaths every year. They also transmit devastating diseases such as yellow fever, West Nile fever and dengue. However, efforts to control them are consistently undermined by the difficulty and expense of identifying mosquitoes – of which there are at least 3,500 species, many of them hard to tell apart.

1.11 ASSESSMENT IN DESIGN AND TECHNOLOGY

Professor Richard Kimbell directed the DES funded Assessment of Performance Unit research project in Design and Technology. In 1990 he founded the Technology Education Research Unit (TERU) at Goldsmiths College, University of London, which is now running a wide range of funded research projects in design and technology and IT. He has published widely in the field, including reports commissioned by the Congress of the United States, UNESCO and NATO; he has written and presented television programmes and regularly lectures internationally. His latest book *Assessing Technology: International Trends in Curriculum and Assessment* won the international technology education book of the year award from the Council for Technology Teacher Education at ITEA in 1999 in Minneapolis, USA.

Kay Stables is Reader in Design and Technology Education and former Head of the Design Department at Goldsmiths College, University of London. She started her career as a textiles teacher, moving to Goldsmiths as a part of the APU D&T research team. From 1990–1992 she was Project Director for the Key Stage 1 Technology SAT developments and followed this as Research Associate on the Understanding Technological Approaches project which built case studies of D&T work from children aged 5–16. Most recently she has conducted, with Richard Kimbell, an evaluation of the impact of a technology education initiative in South Africa and is currently researching into the use of handling collections in developing D&T capability and literacy.

1.12 ORIGIN OF VACCINATION

According to the literature, the history of vaccination can be traced back to as early as the 7th century when the monks in India tried to immunize themselves by drinking snake venom. The first vaccination was inoculation with human smallpox, a practice widely carried out in ancient India, Arabia, and China. This method of vaccination consisted of collecting pus from a patient suffering from mild form of smallpox virus infection and inoculating the sample to a healthy human, which later led to a minor infection.

This method was first introduced in England by a Greek named E. Timoni. However, this method had a risk of spreading smallpox in the community and even worsening the health condition of the person who received the inoculation.

While the use of human smallpox vaccine was controversial, E. Jenner came up with bovine smallpox vaccine in 1796; this new method also faced controversy, but continued to be universalized. Smallpox became a preventable disease by injecting pus extracted from a human infected with cowpox virus. Jenner named the substance "vaccine" after the Latin word "vacca" which means "cow," and thus the process of giving vaccine became "vaccination".

1.13 MUD VOLCANO

Gas drilling on the Indonesian island of Java has triggered a "mud volcano" that has killed 13 people and may render four square miles (ten square kilometers) of countryside uninhabitable for years.

In a report released on January 23, a team of British researchers says the deadly upwelling began when an exploratory gas well punched through a layer of rock 9,300 feet (2,800 meters) below the surface, allowing hot, high-pressure water to escape.

The water carried mud to the surface, where it has spread across a region 2.5 miles (4 kilometers) in diameter in the eight months since the eruption began.

The mud volcano is similar to a gusher or blowout, which occur in oil drilling when oil or gas squirt to the surface, the team says. This upwelling, however, spews out a volume of mud equivalent to a dozen Olympic swimming pools each day.

Although the eruption isn't as violent as a conventional volcano, more than a dozen people died when a natural gas pipeline ruptured.

The research team, who published their findings in the February issue of GSA Today, also estimate that the volcano, called Lusi, will leave more than 11,000 people permanently displaced.

词汇补充:

1.14 STRESS

Stress is what you feel when you have to handle more than you are used to. When you are stressed, your body responds as though you are in danger. It makes hormones that speed up your heart, make you breathe faster, and give you a burst of energy. This is called the fight-or-flight stress response.

Some stress is normal and even useful. Stress can help if you need to work hard or react quickly. For example, it can help you win a race or finish an important job on time.

But if stress happens too often or lasts too long, it can have bad effects. It can be linked to headaches, an upset stomach, back pain, and trouble sleeping. It can weaken your immune system, making it harder to fight off disease. If you already have a health problem, stress may make it worse. It can make you moody, tense, or depressed. Your relationships may suffer, and you may not do well at work or school.

词汇补充:

1.15 WHY BIRDS SING

Wittgenstein had the nerve to warn us that if a lion could talk, we would not understand him. Can you be so sure, Herr Ludwig? If a lion roars, we do understand him. If a cat purrs, we understand her. And if the voice of an animal is not heard as message but as art, interesting things start to happen: Nature is no longer an alien enigma, but instead something immediately beautiful, an exuberant opus with space

for us to join in. Bird melodies have always been called songs for a reason. As long as we have been listening, people have presumed there is music coming out of those scissoring beaks.

词汇补充:

1.16 FLYING THE CROWDED SKIES

By 2025, government experts say, America's skies will swarm with three times as many planes, and not just the kind of traffic flying today. There will be thousands of tiny jets, seating six or fewer, at airliner altitudes, competing for space with remotely operated drones that need help avoiding midair collisions, and with commercially operated rockets carrying satellites and tourists into space.

To keep passengers moving safely and on schedule, the Federal Aviation Administration needs to replace a half-century of outmoded technology with a new air traffic control system. But almost everything about the proposed new system is unsettled, not only its digital nuts and bolts, but also the leadership, the financing and the staffing of a modern aviation network.

1.17 SEA/LAND BREEZES BODY

During the day, the sun heats up both the ocean surface and the land. Water is a good absorber of the energy from the sun. The land absorbs much of the sun's energy as well. However, water heats up much more slowly than land and so the air above the land will be warmer compared to the air over the ocean. The warm air over the land will rise throughout the day, causing low pressure at the surface. Over the water, high surface pressure will form because of the colder air. To compensate, the air will sink over the ocean. The wind will blow from the higher pressure over the water to lower pressure over the land causing the sea breeze. The sea breeze strength will vary depending on the temperature difference between the land and the ocean.

词汇补充:

breeze,

absorber,

absorbs,

compensate,

sink,

vary

1.18 AMAZONIAN AMPHIBIAN DIVERSITY

Colorful poison frogs in the Amazon owe their great diversity to ancestors that leapt into the region from the Andes Mountains several times during the last 10 million years, a new study from The University of Texas at Austin suggests.

This is the first study to show that the Andes have been a major source of diversity for the Amazon basin, one of the largest reservoirs of biological diversity on Earth. The finding runs counter to the idea that Amazonian diversity is the result of evolution only within the tropical forest itself.

"Basically, the Amazon basin is a 'melting pot' for South American frogs," says graduate student Juan Santos, lead author of the study. "Poison frogs there have come from multiple places of origin, notably the Andes Mountains, over many millions of years. We have shown that you cannot understand Amazonian biodiversity by looking only in the basin. Adjacent regions have played a major role."

1.19 MT. EVEREST

Called Chomolungma ("goddess mother of the world") in Tibet and Sagarmatha ("goddess of the sky") in Nepal, Mount Everest once went by the pedestrian name of Peak XV among Westerners. That was before surveyors established that it was the highest mountain on Earth, a fact that came as something of a surprise—Peak XV had seemed lost in the crowd of other formidable Himalayan peaks, many of which gave the illusion of greater height.

In 1852 the Great Trigonometrical Survey of India measured Everest's elevation as 29,002 feet above sea level. This figure remained the officially accepted height for more than one hundred years. In 1955 it was adjusted by a mere 26 feet to 29,028 (8,848 m).

The mountain received its official name in 1865 in honor of Sir George Everest, the British Surveyor General from 1830—1843 who had mapped the Indian subcontinent. He had some reservations about having his name bestowed on the peak, arguing that the mountain should retain its local appellation, the standard policy of geographical societies.

Before the Survey of India, a number of other mountains ranked supreme in the eyes of the world. In the seventeenth and eighteenth centuries, the Andean peak Chimborazo was considered the highest. At a relatively unremarkable 20,561 feet (6,310 m), it is in fact nowhere near the highest, surpassed by about thirty other Andean peaks and several dozen in the Himalayas. In 1809, the Himalayan peak Dhaulagiri (26,810 ft.; 8,172 m) was declared the ultimate, only to be shunted aside in 1840 by Kanchenjunga (28,208 ft.; 8,598 m), which today ranks third. Everest's status has been unrivaled for the last century-and-a-half, but not without a few threats.

1.20 UNITED NATIONS

Founded after World War II by 51 "peace-loving states" combined to oppose future aggression, the UN now counts 193 member nations, including its newest members, Nauru, Kiribati, and Tonga in 1999, Tuvalu and Yugoslavia in 2000, Switzerland and East Timor in 2002, Montenegro in 2006, and South Sudan in 2011.

United Nations Day has been observed on October 24 since 1948 and celebrates the objectives and accomplishments of the organization, which was established on October 24, 1945.

The UN engages in peacekeeping and humanitarian missions across the globe. Though some say its influence has declined in recent decades, the United Nations still plays a tremendous role in world politics. In 2001 the United Nations and Kofi Annan, then secretary-general of the UN, won the Nobel Peace Prize "for their work for a better organized and more peaceful world."

Since 1948 there have been 63 UN peacekeeping operations; 16 are currently under way. Thus far, close to 130 nations have contributed personnel at various times; 119 are currently providing peacekeepers. As of 31 August 2008, there were 16 peacekeeping operations underway with a total of 88,230 personnel. The small island nation of Fiji has taken part in virtually every UN peacekeeping operation, as has Canada.

1.21 FOREIGN STUDENTS' ENGLISH STANDARDS

Federal Education Minister Julie Bishop says she has seen no evidence that foreign students are graduating from Australian universities with poor English skills.

Research by Monash University academic Bob Birrell has found a third of foreign students are graduating without a competent level of English. But Ms. Bishop says Australian universities only enroll foreign students once they have achieved international standards of language proficiency. "This has been an extraordinary attack by Professor Birrell on our universities," she said. "International students must meet international benchmarks in English language in order to get a place at a university in Australia and they can't get into university without reaching that international standard."

University of Canberra vice chancellor Roger Dean also says international students are required to sit an English test before being admitted to nearly all Australian universities. "There are, of course, intercultural difficulties as well as language difficulties," he said. "There are, of course, also many Australian students who don't speak such fantastically good English either. So we're trying to push the standard even higher than present but it's a very useful one already."

Ms Bishop says Australia's university system has high standards. "I've seen no evidence to suggest that students are not able to complete their courses because they're failing in English yet they're being passed by the universities," she said. "I've not seen any evidence to back that up. International education is one of our largest exports, it's our fourth largest export and it's in the interest of our universities to maintain very high standards because their reputation is at stake."

1.22 NATIONAL OWNERSHIP OF COUNTRY STRATEGIES

The principal and most consistently articulated recommendation of the world conferences was that countries must take full responsibility for their own development. National responsibility for national development is the necessary consequence of sovereignty. The Monterrey Consensus states that ‘Each country has primary responsibility for its own economic and social development, and the role of national policies and development strategies cannot be overemphasized’. National development strategies and policies are therefore critically important. This was reflected most recently at the 2005 Summit when Member States agreed on a target date of 2006 for all developing countries to adopt and start to implement comprehensive national development strategies to achieve the internationally agreed development goals and objectives, including the MDGs.

The automatic corollary of that principle is that each country must be free to determine its own development strategy. It is essential that all donors and lenders accept the principle of country ownership of national development strategies. This implies the acceptance of the principle that development strategies should not only be attuned to country circumstances, but also be prepared and implemented under the leadership of the governments of the countries themselves. The 2005 World Summit also acknowledged, in this regard, that all countries must recognize the need for developing countries to strike a balance between their national policy priorities and their international commitments.

1.23 AUSTRALIAN OVERSEAS DEPARTURES

Over the past ten years, Australian overseas departures have grown from 1.7 million to 3.2 million. This represents strong average, annual growth of 6.5 per cent. This paper analyses outbound travel demand to each destination country using the travel demand models of short-term resident departures. The models are specified in terms of a double logarithmic linear functional form, with overseas

departures as the dependent variable and real household disposable income prices of travel and accommodation in Australia, and overseas and the exchange rate as independent variables.

The models were estimated using historical times series data from 1974 to 1998. The data were obtained from several sources such as the World Tourism Organization, Australian Bureau of Statistics, World Bank and International Monetary Fund. The results suggest that the estimated elasticity parameters are consistent with standard economic theory. The number of short-term resident departures is positively influenced by per capita real household disposable income; and the price of domestic travel and accommodation, are negatively influenced by the price of travel and accommodation overseas.

The estimated demand models were used to develop the Tourism Forecasting Council's long run forecasts. The forecasts suggest the number of short-term resident departures will increase strongly over the next ten years, largely due to the strength of the Australian economy, competitive travel prices, and Australians' interest in knowing different cultures and lifestyles.

1.24 SCHOOL TO WORK TRANSITION

School-to-work transition is a historically persistent topic of educational policymaking and reform that impacts national systems of vocational education and training. The transition process refers to a period between completion of general education and the beginning of vocational education or the beginning of gainful employment as well as to training systems, institutions, and programs that prepare young people for careers. The status passage of youth from school-to-work has changed structurally under late modernism, and young people are forced to adapt to changing demands of their environment especially when planning for entry into the labor market.

Since the transition to a job is seen as a major success in life, youth who manage this step successfully are more optimistic about their future; still others are disillusioned and pushed to the margins of

society. While some young people have developed successful strategies to cope with these requirements, those undereducated and otherwise disadvantaged in society often face serious problems when trying to prepare for careers. Longer transitions lead to a greater vulnerability and to risky behaviors.

1.25 ONLINE CAMPUS

Richard Morris, of the school of accounting at the University of NSW, which requires an entrance score in the top 5 per cent of students, says attendance has been a problem since the late 1990s.

"Sometimes in the lectures we've only got about one- third of students enrolled attending," he said.

"It definitely is a problem. If you don't turn up to class you're missing out on the whole richness of the experience: you don't think a whole lot, you don't engage in debates with other students - or with your teachers."

It is not all gloom, said Professor John Dearn, a Pro Vice-Chancellor at the University of Canberra, who said the internet was transforming the way students access and use information.

"It is strange that despite all the evidence as to their ineffectiveness, traditional lectures seem to persist in our universities."

词汇补充:

1.26 THE WRITING ON THE WALL

The inevitable consequences include rampant corruption, an absence of globally competitive Chinese companies, chronic waste of resources, rampant environmental degradation and soaring inequality. Above all, the monopoly over power of an ideologically bankrupt communist party is inconsistent with the pluralism of opinion, security of property and vibrant competition on which a dynamic economy depends. As a result, Chinese development remains parasitic on know-how and institutions developed elsewhere.

1.27 ARABIC MBA IN EDINBURGH

Arab students will be able to sign up to study at a distance for the business courses in their own language. The Edinburgh Business School announced the project at a reception in Cairo on Saturday. It is hoped the course will improve links between the university and the Arab business world. A university spokeswoman said: "The Arabic MBA will raise the profile of Heriot-Watt University and the Edinburgh Business School among businesses in the Arabic-speaking world and will create a

strong network of graduates in the region." The first intake of students is expected later this year. Professor Keith Lumsden, director of Edinburgh Business School, said: "Arabic is a major global language and the Arab world is a centre for business and industrial development. We are proud to work with Arab International Education to meet the demands of the region."

词汇补充:

1.28 JEAN PIAGET

Jean Piaget, the pioneering Swiss philosopher and psychologist, spent much of his professional life listening to children, watching children and poring over reports of researchers around the world who were doing the same. He found, to put it most succinctly, that children don't think like grownups. After thousands of interactions with young people often barely old enough to talk, Piaget began to suspect that behind their cute and seemingly illogical utterances were thought processes that had their own kind of order and their own special logic. Einstein called it a discovery "so simple that only a genius could have thought of it."

Piaget's insight opened a new window into the inner workings of the mind. By the end of a wide-ranging and remarkably prolific research career that spanned nearly 75 years, from his first scientific publication at age 10 to work still in progress when he died at 84, Piaget had developed several new fields of science: developmental psychology, cognitive theory and what came to be called genetic epistemology. Although not an educational reformer, he championed a way of thinking about children that provided the foundation for today's education-reform movements. It was a shift comparable to the displacement of stories of "noble savages" and "cannibals" by modern anthropology. One might say that Piaget was the first to take children's thinking seriously.

1.29 ARROGANCE ON A GRAND SCALE

In the last years of the wheat boom, Bennett had become increasingly frustrated at how the government seemed to be encouraging an exploitive farming binge. He went directly after his old employer, the Department of Agriculture, for misleading people. Farmers on the Great Plains were working against nature, he thundered in speeches across the country; they were asking for trouble. Even in the late 1920s, before anyone else sounded an alarm, Bennett said people had sown the seeds of an epic disaster. The government continued to insist, through official bulletins, that soil was the one "resource that cannot be exhausted." To Bennett, it was arrogance on a grand scale.

1.30 CHILDREN CENTRED MOTHERS

The conducted study serves to three objectives. The first objective is to reveal the values loaded to the child by the child centric mother's attitude and the behavior about the effect of 5-6 aged nursery school children on the purchasing decision of the families who belong to high socio-economic class. The second objective is to develop child centricity scale and the third objective is to examine the attitude and behaviour differences between low child centric and high child centric mothers. Analyzing the data gathered from 257 mother respondents, the researchers have found out that the lowest influence of child upon the purchasing decision of the family are those which carry high purchasing risk and used by the whole family, whereas the highest influence of the child upon the purchasing decision of the family are the products with low risk and used by the whole family. Findings also reveal that there are statistically significant differences between the high child centricity and low child centricity mothers regarding the purchasing products that are highly risky and used by the whole family.

1.31 FUNERARY VIOLIN

In the 250 years of its active evolution Funerary Violin moved from the formal to the personal. It is clear from the earliest accounts of the form that its role during the sixteenth and seventeenth centuries was largely heraldic: to exemplify the continuity of the social structure. The few works that have survived from this period are often surprisingly unemotional and at times overtly grandiose. It was not until the second half of the 18th century and particularly the works of Herr Gratchenfleiss, that we see the realisation of a form that actively depicts the tragedy and grief that were to become the cornerstone of the genre. However, Gratchenfleiss' vision was not merely limited to solemn marches, but also extended into narrative works depicting the freeing of the soul from the body, the momentary panic as death approaches and the eulogising of the dead by the bereaved, and it is these works that hold the greatest resonance for mourners today. They are plaintive but not morbid, spiritual but not solemn, melancholy but not tragic, and as such their tentative return to popularity in the today's chapel of rest is indicative of many of our current underlying attitudes towards mortality.

1.32 MORALITY OF WELFARE

The morality of the welfare state depends on contribution and responsibility. Since some people don't contribute and many are irresponsible, the choices of those who do contribute and are responsible is either to tolerate the free riders, refuse to pay for the effects of their irresponsibility or trust the state to educate them.

Hence the government campaigns against smoking, alcoholism, obesity and gas guzzling - the first two solidly in place, the other two ramping up. But the British state now goes further: it acts in favour of sexual and racial minorities. In the case of gay men and women this means progressively removing the legal disadvantages under which they have lived, and ensuring that society as a whole observes the new order.

1.33 ESTEE LAUDER

Leonard Lauder, chief executive of the company his mother founded, says she always thought she "was growing a nice little business." And that it is. A little business that controls 45% of the cosmetics market in U.S. department stores. A little business that sells in 118 countries and last year grew to be \$3.6 billion big in sales. The Lauder family's shares are worth more than \$6 billion.

But early on, there wasn't a burgeoning business, there weren't houses in New York, Palm Beach, Fla., or the south of France. It is said that at one point there was one person to answer the telephones who changed her voice to become the shipping or billing department as needed. You more or less know the Estée Lauder story because it's a chapter from the book of American business folklore. In short, Josephine Esther Mentzer, daughter of immigrants, lived above her father's hardware store in Corona, a section of Queens in New York City. She started her enterprise by selling skin creams concocted by her uncle, a chemist, in beauty shops, beach clubs and resorts.

No doubt the potions were good — Estée Lauder was a quality fanatic — but the saleslady was better. Much better. And she simply outworked everyone else in the cosmetics industry. She stalked the bosses of New York City department stores until she got some counter space at Saks Fifth Avenue in 1948. And once in that space, she utilized a personal selling approach that proved as potent as the promise of her skin regimens and perfumes.

1.34 VEGETARIAN MARKET

Mintel Consumer Intelligence estimates the 2002 market for vegetarian foods, those that directly replace meat or other animal products, to be \$1.5 billion. Note that this excludes traditional vegetarian foods such as produce, pasta, and rice. Mintel forecasts the market to nearly double by 2006 to \$2.8 billion, with the highest growth coming from soymilk, especially refrigerated brands.

The Food and Drug Administration's 1999 decision to allow manufacturers to include heart-healthy claims on foods that deliver at least 6.25 grams of soy protein per serving and are also low in saturated fat and cholesterol has spurred tremendous interest in soymilk and other soy foods. A representative of manufacturer Food Tech International (Veggie Patch brand) reported that from 1998 to 1999, the percentage of consumers willing to try soy products jumped from 32% to 67%. Beliefs about soy's effectiveness in reducing the symptoms of menopause also attracted new consumers. A 2000 survey conducted by the United Soybean Board showed that the number of people eating soy products once a week or more was up to 27%. Forty-five percent of respondents had tried tofu, 41% had sampled veggie burgers, and 25% had experience with soymilk (Soyfoods USA e-mail newsletter). Mintel estimates 2001 sales of frozen and refrigerated meat alternatives in food stores at nearly \$300 million, with soymilk sales nearing \$250 million.

1.35 JUST IN TIME

`Just-in-time' is a management philosophy and not a technique. It originally referred to the production of goods to meet customer demand exactly, in time, quality and quantity, whether the `customer' is the final purchaser of the product or another process further along the production line. It has now come to mean producing with minimum waste. "Waste" is taken in its most general sense and includes time and resources as well as materials.

词汇补充:

minimum,
originally,
philosophy,

purchaser,
quantity

1.36 US BUSINESS SCHOOLS

Top US business schools are recruiting younger, less experienced candidates in an effort to boost applications and head off competition for the best students from other graduate programmes such as law and public policy.

In an attempt to lure new students, leading business schools - including Harvard, Stanford, the University of Chicago and Wharton - have moved away from the unofficial admissions prerequisite of four years' work experience and instead have set their sights on recent college graduates and so-called "early career" professionals with only a couple years of work under their belt.

词汇补充:

unofficial

1.37 FINANCIAL DIRECTORS

There isn't a financial director around who wouldn't like to accelerate cash flow by reducing debtors days – in other words, get customers to pay up faster. In Europe's top 1000 quoted companies, nearly one quarter of all invoices are unpaid at any point in time, according to recent research carried out by the ASF organization. This means they are sitting on a total of 274 bn overdue debt. Most of this is caused by poor collection practices. According to Jan Porter, ASF's Managing Director, "You can set up all the systems you want, you can insist on watertight contracts and payment terms, the government can even introduce late payment legislation, but there are always come debtors who fail to pay on time".

Once a payment is overdue, your first step is to talk to your debtor. You should let them know the payment is late and try to find out if there is a dispute about the work, or if your debtor has financial problems. This is OK, but Tim Vainio, a chartered accountant, believes that too many companies are afraid of losing a relationship, and that, before undertaking any action, the focus should be on recovering as much money as possible, rather than on preserving a relationship.

词汇补充:

watertight

1.38 EVALUATING A CAREER DECISION

When I enrolled in my master's course at Oxford last year, I had come straight from medical school with the decision to leave clinical science for good. Thinking back, I realize that I didn't put very much weight on this decision at the time. But today, I more clearly understand the consequences of leaving my original profession. When I meet old friends who are now physicians and surgeons, I sense how our views on medical problems have diverged. They scrutinize the effects of disease and try to eliminate or alleviate them; I try to understand how they come about in the first place. I feel happier working on this side of the problem, although I do occasionally miss clinical work and seeing patients.

However, when I think about the rate at which my medical skills and knowledge have dissipated, the years spent reading weighty medical textbooks, the hours spent at the bedside, I sometimes wonder if these years were partly a waste of time now that I am pursuing a research career.

Nonetheless, I know the value of my medical education. It is easy to forget the importance of the biosciences when working with model organisms in basic research that seem to have nothing to do with a sick child or a suffering elderly person. Yet, I still have vivid memories of the cruel kaleidoscope of severe diseases and of how they can strike a human being. I hope to retain these memories as a guide in my current occupation.

1.39 TRIGGER POINT

The trigger point causes the rest of the fiber segments to be stretched to capacity. It becomes a tight band.

Normally the regular contracting and releasing of these little segments circulates blood in the capillaries that supply them (the segments) with their nutrients. When they hold this contraction, blood flow is stopped to that area, there is not an oxygen supply, and waste products are not pushed out.

The trigger point then sends out pain signals until the trigger point is put in a position of rest again.

词汇补充:

segments,	circulates,
trigger	contraction,
capillaries,	fiber,

1.40 CUSTOMER SERVICES

Good customer service relates to the service your and your employees provide before, during and after a purchase. For example, it's how you interact with your customers. Improving your customer service skills can lead to greater customer satisfaction and a more enjoyable experience for them.

No matter the size of your business good customer service, needs be at the heart of your business model if you wish to be successful. It is important to provide good customer service; to all types of customers, including potential, new and existing customers.

Although it can take extra resources, time and money, good customer service leads to customer satisfaction which can generate positive word-of-mouth for your business, keep your customers happy and encourage them to purchase from your business again. Good customer service can help your business grow and prosper.

词汇补充:

satisfaction
enjoyable,
interact,

prosper,

1.41 LANGUAGE

If after years of Spanish classes, some people still find it impossible to understand some native speakers, they should not worry. This does not necessarily mean the lessons were wasted. Millions of Spanish speakers use neither standard Latin American Spanish nor Castilian, which predominate in U.S. schools.

The confusion is partly political – the Spanish-speaking world is very diverse. Spanish is the language of 19 separate countries and Puerto Rico. This means that there is no one standard dialect.

The most common Spanish dialect taught in the U.S. is standard Latin American. It is sometimes called "Highland" Spanish since it is generally spoken in the mountainous areas of Latin America.

While each country retains its own accents and has some unique vocabulary, residents of countries such as Mexico, Colombia, Peru, and Bolivia generally speak Latin American Spanish, especially in urban centers. This dialect is noted for its pronunciation of each letter and its strong "r" sounds. This

Spanish was spoken in Spain in the sixteenth and seventeenth centuries, and was brought to the Americas by the early colonists.

However, the Spanish of Madrid and of northern Spain, called Castilian, developed characteristics that never reached the New World. These include the pronunciation of "ci" and "ce" as "th." In Madrid, "gracias" (thank you) becomes "gratheas" (as opposed to "gras-see-as" in Latin America.) Another difference is the use of the word "vosotros" (you all, or you guys) as the informal form of "ustedes" in Spain. Castilian sounds to Latin Americans much like British English sounds to U.S. residents.

1.42 C.S. LEWIS

C. S. Lewis, or Jack Lewis, as he preferred to be called, was born in Belfast, Ireland (now Northern Ireland) on November 29, 1898. He was the second son of Albert Lewis, a lawyer, and Flora Hamilton Lewis. His older brother, Warren Hamilton Lewis, who was known as Warnie, had been born three years earlier in 1895.

Lewis's early childhood was relatively happy and carefree. In those days Northern Ireland was not yet plagued by bitter civil strife, and the Lewises were comfortably off. The family home, called Little Lea, was a large, gabled house with dark, narrow passages and an overgrown garden, which Warnie and Jack played in and explored together. There was also a library that was crammed with books – two of Jack's favorites were Treasure Island by Robert Louis Stevenson and The Secret Garden by Frances Hodgson Burnett.

This somewhat idyllic boyhood came to an end for Lewis when his mother became ill and died of cancer in 1908. Barely a month after her death the two boys were sent away from home to go to boarding school in England.

Lewis hated the school, with its strict rules and hard, unsympathetic headmaster, and he missed Belfast terribly. Fortunately for him, the school closed in 1910, and he was able to return to Ireland.

After a year, however, he was sent back to England to study. This time, the experience proved to be mostly positive. As a teenager, Lewis learned to love poetry, especially the works of Virgil and Homer. He also developed an interest in modern languages, mastering French, German, and Italian.

1.43 WILLIAM SHAKESPEARE

For all his fame and celebration, William Shakespeare remains a mysterious figure with regards to personal history. There are just two primary sources for information on the Bard: his works, and various legal and church documents that have survived from Elizabethan times. Naturally, there are many gaps in this body of information, which tells us little about Shakespeare the man.

William Shakespeare was born in Stratford-upon-Avon, allegedly on April 23, 1564. Church records from Holy Trinity Church indicate that he was baptized there on April 26, 1564. Young William was born of John Shakespeare, a glover and leather merchant, and Mary Arden, a landed local heiress. William, according to the church register, was the third of eight children in the Shakespeare household – three of whom died in childhood. John Shakespeare had a remarkable run of success as a merchant, alderman, and high bailiff of Stratford, during William's early childhood. His fortunes declined, however, in the late 1570s.

1.44 THEA PROCTOR

Thea Proctor was just sixteen when her entry at the Bowral Art Competition caught the eye of the judge, Arthur Streeton. It was the first of many associations with art world recruits. The next year saw her at the Julian Ashton Art School in the illustrious company of Elioth Gruner, Sydney Long and George Lambert, for whom she often posed and who remained her great friend until his death in 1930.

Lambert's paintings and sketches of Proctor emphasize the elegance of her dress. A keen interest in fashion was just one aspect of her fascination with design, and she saw herself as an early style guru on a quest to rid Australian art of "its lack of imagination and inventive design". Skilled in watercolor" and drawing, Proctor did not limit herself to paper, canvases or to her popular magazine illustrations; she designed theater sets and a restaurant interior and wrote on a range of subjects from flower arranging to the colors of cars. It made for a busy and varied life but, as she said, she was not the sort of person "who could sit at home and knit socks".

词汇补充:
